

Signal Energy, Inc.

A TRUSTED PARTNER FROM CONCEPT TO COMPLETION

Signal Energy, Inc. has been providing a complete range of engineering, procurement, and general contracting services to the wind and solar industries throughout North America since 2005. Through the strength of EMJ Corporation, our parent company, we are able to provide a broad

depth of resources, expertise, and a culture of innovation to the construction of wind and solar projects of any size. Since our inception, we have set and continue to maintain the industry standards for professionalism and integrity in renewable energy projects.

Signal Energy provides balance of plant (BOP) construction services for all phases of wind and solar project

to Midwestern agricultural areas to mountainous terrain on both the East and West Coasts of the United States. We are proud to have completed more than twenty utility scale wind projects, including the recent construction of the tallest wind turbines in North America.

The complexity involved in developing today's renewable energy projects makes

the creation of long term relationships between owners and developers absolutely essential. For this reason, our business philosophy is founded on developing these relationships and serving as a strategic partner with our clients to complete projects in a timely fashion.

"We have become one of the nation's leading BOP general contractors through our commitment to construction of high quality renewable energy projects that exceed the expectations of our clients," states Ben Fischer, Signal Energy's President. "We significantly impact the Chattanooga area by utilizing local service providers and material and equipment producers in our work. We will continue to grow and build on the solid foundation we have laid of designing and building safe, quality, and cost-effective renewable energy projects."

construction, from pre-construction planning through to completion. Our extensive capabilities, invaluable in the planning and development stages of a project, extend to every aspect of solar and wind farm development and construction:

- Civil infrastructure
- Electrical collection
- Substations and inter connection facilities
- Erection and transmission lines

Signal Energy professionals have been called upon to design and build renewable power projects in areas ranging from West Texas oil fields
